I don't believe so – Dave Olszyk has been involved in pesticide work for some time, but I think it has been more about plants. I did send him a message and will let you know if I hear anything.

There is a good group in USGS at the Oregon WSC working on organics and POPs, I would refer you to them. Jennifer Morace. You might know her already, but she seems very good.

Jana,

Thanks for the plan.

Regarding the herbicide work, has WED done (or is doing) water quality and herbicide work?

Hope to talk with you soon.

Alan

Hi Alan –

I asked Joe Ebersole and EPA-WED is not doing any fish herbicide work.

I am sending the RARE QAPP, hopefully that will work for your colleague.

Jana

Jana,

Do you know if anyone in the Corvallis Lab is doing or has done research on the effects of herbicides on fish and other aquatic life in coastal streams in Oregon. If so could you send me contact information.

Hope all is well. I am going to try to make the next RARE call. Unfortunately, CZARA has taking all of my work time.

Also, do you have an e-copy of the RARE sampling plan. One of my colleagues working in the Yakima Basin would like to take a look at it.

Thanks.

Alan
